Technology Utilized:	Demolition and Excavation

Project Description

SEMS was contracted by IT Corp. to provide remediation activities at a new car dealership in Picayune, MS. The scope of work involved the removal of a hydraulic lift system and the excavation of contaminated soils associated with the lift.

SEMS:

- C Saw cut the concrete floor, broke up the slab and removed the debris,
- C Removed the above ground system components,
- C Excavated around the lift cylinder,
- C Removed the cylinder, piping, and hydraulic reservoir tank,
- C Excavated the remaining contaminated soil and collected verification samples, and
- C Upon receipt of acceptable results, the excavation was backfilled, compacted, and a new concrete slab was poured to match the existing concrete finish.

The work was completed on time and at budget.
