

Project Name:	TN & Associates-England
Project Location:	Alexandria, Louisiana
Project Completion Date:	March 2001
Project Duration:	1 Week
Project Value:	\$117,000
Client Name:	TN & Associates, Inc.
Client Contact:	Ms. Joy Lozano
Client Phone Number:	(210) 826-9878
Technology Utilized:	Excavation/Transportation/ Disposal

Project Description

SEMS was contracted by TN & Associates, Inc. to excavate lead contaminated soil from under and around an elevated water tower. Approximately 290 tons of soil was removed. Thirty tons contained non-hazardous levels of lead. This material was transported to a permitted non-hazardous landfill. Two-hundred sixty tons contained hazardous levels of lead which was transported to a permitted hazardous landfill where it was stabilized prior to landfilling.

Upon completion of the excavation activities and receipt of confirmatory analytical results, the excavation area was backfilled with imported, clean fill and topped with a layer of imported topsoil. Hydroseeding completed the site restoration activities.
