

Project Name:	WMI-Cytec
Project Location:	Cytec, Waggaman, LA
Project Completion Date:	January 2001
Project Duration:	3 Weeks
Project Value:	\$89,500
Client Name:	Waste Management, Inc.
Client Contact:	Mr. Ben Twiner
Client Phone Number:	(214) 667-6129
Technology Utilized:	Sludge Solidification Demolition, Transportation, and Disposal

Project Description

SEMS was contracted by Waste Management, Inc. to provide remediation services at the Cytec plant in Waggaman, LA. The scope of work involved the demolition of two concrete structures: the Acetylene Dike and the former Topping Station. The topping station contained approximately 400 tons of non-hazardous sludge. The sludge was solidified through the incorporation of approximately 60 tons of Type I Portland Cement. The solidified sludge was loaded into rolloff boxes for disposal by Waste Management. The concrete structures were demolished and the resulting 1758 tons of concrete debris was loaded into rolloff boxes for disposal by Waste Management. Approximately 600 yards of imported fill was used to backfill the impacted areas. The areas were regraded and hydroseeded to complete the project. The project was completed on time and within budget.
