Client Phone Number:	(919) 379-3740
Technology Used:	Various

Project Description

SEMS, Inc. has been contracted by E-Z Serve Convenience Stores (E-Z Serve) since 1993 for environmental consulting services at sites within Louisiana. As part of the environmental consulting services, SEMS has installed and operated eight groundwater treatment systems.

SEMS has extensive knowledge in operating and maintaining the groundwater treatment systems and ensuring good communication with regulatory agencies. Groundwater treatment systems are visited twice per month to ensure proper operation. During one of the monthly visits, effluent water samples are collected for field and analytical testing in accordance with LPDES permit requirements.

A site visit consists of recording/evaluating gauge and meter readings within the system/plant, collecting field measurements for pH, collecting discharge samples according to permit requirements, and shipping/delivery to lab for analysis, checking for proper operation, performing repairs as needed.

In accordance with permit requirements, SEMS prepares discharge monitoring reports (DMRs) and Non-compliance reports, if required.
