<b>Technology Utilized:</b>	<b>Sampling, Risk Assessment, and Cleanup</b>

### **Project Description**

SEMS, Inc. was contracted to perform general sampling, consulting, and engineering services from Equilon Pipeline Company, LLC. (Equilon).

SEMS performs NPDES permitted outfalls from sewer treatment and rainfall outfalls for Equilon facilities throughout southern Louisiana. SEMS prepares the Discharge Monitoring Reports (DMRs) on a quarterly basis. SEMS also performs sampling activities on any wastes generated at these facilities (the wastes include fiberglass, lead paint, hydrostatic test water, and sludge residues).

SEMS performed a closure plan for a bulk storage facility in southern Louisiana utilizing risk based regulations. The site was closed with no further action utilizing risk based closure criteria, which were much higher than typical regulatory limits.

SEMS performed emergency response services for Equilon throughout the central U.S.
