

Project Name:	Air Monitoring, Sampling, Permitting and Reporting
Project Location:	Baton Rouge, Louisiana
Project Completion Date:	Ongoing
Project Duration:	Ongoing
Project Value:	\$ 10,000 per year
Client Name:	Ethyl Corporation
Client Contact:	Mr. Gene Ponti
Client Phone Number:	(225) 359-2856
Technology Utilized:	Permitting, Air Monitoring, Statistical Analysis, and Material Balance

Project Description:

SEMS is contracted by Ethyl Corporation to perform air monitoring, sampling, permitting, and reporting services. These services are performed for their permitted discharge points as well as long term and short term projects.

SEMS performs all the material balance calculations, sampling, permitting, and reporting for all air discharges associated with their groundwater treatment systems. SEMS develops the air permits, perform the air monitoring requirements, analyze the data, and then report to the administrative authority (annual reports, TEDI, and EIS).

SEMS performs similar services for long term and short term projects that require air permits or small source exemptions. Projects have also included personal monitoring and ambient air monitoring for projects that involved in field decisions on the level of protection needed by the field crews.
